Skills

C#, .NET, Domain Driven Design, React, NodeJS, ExpressJS, REST, Pug, MongoDB, MySQL, Git, Azure DevOps, Information Security, Mobile Security

Education

M.S. in Computer Science

Georgia Southwestern State University | May 2025 - Present

B.S. in Software Design and Development, Minor in Computer Science

University of West Florida | August 2018 – December 2021

- Dean's List, Fall 2021
-

Work Experience

Astrion, Software Engineer II | January 2023 - Present

Active Secret Clearance

- Currently working on the NextGen Open Mission Services (NOMS) web application to support USAF mission planning utilizing a .NET backend and a React frontend
- Earned a team award for steadfast commitment in successfully integrating the Common Advanced Safe Escape Software (CASES) with the Enhanced Paveway II weapon model
- Collaborating closely with other teams to implement functionality that enhances the software and meets the clients' needs
- Collaborating closely with the product owner and manager to define technical requirements and generate estimated work timelines
- Currently utilizing the agile software development life cycle by participating in sprint planning, standup meetings, estimating story points, and creating work items
- Working on various spike work items through collaboration with the team and designing UML diagrams to present during brainstorming sessions
- Working hand in hand with junior and senior developers to ensure development meets architectural vision and system designs
- Performing code reviews to ensure that they meet proper code standards and principles
- Worked on existing legacy Combat Weapon Delivery Software (CWDS) for Foreign Military Sales (FMS) mission planning. CWDS is a WPF mission-planning tool that uses the Joint Mission Planning System (JMPS) framework to support aircraft attack planning for ballistic and guided weapons. CWDS simulates aircraft flyout information and weapon trajectories
- Improved the FMS development process by documenting development procedures and CWDS FMS knowledge
- Performed documentation reviews to ensure that they meet the correct technical requirements and procedures before delivery

idgroup, Web Developer Co-Op | April 2022 - December 2022

The idgroup team consults with different clients and assists them in reaching their business and marketing goals.

- Used the Webflow editor to design, build, and launch websites
- Collaborated closely with designers by following the provided Figma designs to produce the desired product
- Implemented JavaScript code inside the Webflow editor for complex parts of the project
- Utilized the Webflow CMS tool to create structured content, design, and automatic updates
- Ensured proper practice in web responsiveness and accessibility to create an excellent user interface and experience
- Certified in Google Search Ads
